

I feel that Petition RM-10740 should not be enacted into law.

The rules governing bandwidth in Part(s) 97.307(a), 2.202(a) are already adequate. Further regulation would only be detrimental

to the amateur service by stifling experimentation which is one of the basis's the amateur service was founded upon.

Also, many commercially manufactured transmitters in use by amateurs would not meet the new standard set by this petition, and would be made obsolete. Many amateurs presently do not possess equipment that can effectively measure occupied bandwidth, or can obtain such equipment cost effectively; therefore stations cannot ensure that their occupied bandwidth is meeting the standard, which could create a possible enforcement issue.

The amateur service has been a self-policing service since its existence. We are demanding of the quality of our own station signals, and the signals of other stations that also use the service.

The rules in Part 97 cover these rules already, and quite adequately. Further regulation would serve no useful purpose.

Respectfully submitted;

Michael R. Raide
